Overview

This project aims to redesign the Carbon Calculator website (<https://calculator.carbonverified.org/>) to match the design and functionality of <https://www.websitecarbon.com/>. The redesign includes creating Figma designs, implementing the user interface, adding loaders and animations, enhancing the user experience, and providing options for sharing reports through PDF or cloud integration.

Features:

1. Analyze and document the design elements of <https://www.websitecarbon.com/>.
2. Create wireframes and mockups in Figma.
3. Review and iterate on designs based on product owner feedback.

Acceptance Criteria:

1. Figma designs match the visual and functional aspects of <https://www.websitecarbon.com/>.
2. Owner approval of the final designs.
3. All necessary pages and components are included in the design.

Tasks:

- **Research:** Analyze the design elements and layout of <https://www.websitecarbon.com/>.
- **Wireframing:** Create initial wireframes in Figma.
- **Mockups:** Develop detailed mockups for all pages and components.
- **Review:** Conduct design reviews with product owner and iterate based on feedback.

- **Finalization:** Finalize the Figma designs for implementation.

UI Implementation

Goal: Implement the UI based on the approved Figma designs.

Features:

1. Develop responsive web pages according to Figma designs.
2. Ensure cross-browser compatibility.
3. Implement basic UI elements (buttons, forms, etc.).

Acceptance Criteria:

1. UI matches the Figma designs and is fully functional.
2. Pages are responsive and work on all major browsers.
3. Basic UI elements are interactive and meet design specifications.

Tasks:

- **Setup:** Set up the development environment and project repository.
- **Development:** Implement the web pages and UI components.
- **Testing:** Conduct cross-browser and responsiveness testing.
- **Review:** Conduct UI reviews and fix any discrepancies.

Loaders and Animations

Goal: Add loaders and animations to enhance the user experience.

Features:

1. Implement loading animations for page transitions.
2. Add interactive animations for UI elements (buttons, hover effects, etc.).
3. Ensure animations are smooth and do not affect performance.

Acceptance Criteria:

1. Loaders and animations are implemented as per design.
2. Animations are smooth and enhance the user experience.

3. No significant performance issues due to animations.

Tasks:

- **Design:** Define the loaders and animations based on the Figma designs.
- **Development:** Implement the loaders and animations in the UI.
- **Testing:** Test the animations for performance and smoothness.
- **Review:** Conduct reviews to ensure animations meet the design and functional requirements.

User Experience Enhancements

Goal: Enhance the overall user experience by refining interactions and usability.

Features:

1. Optimize page load times and performance.
2. Implement user feedback mechanisms (e.g., tooltips, error messages).
3. Enhance accessibility features.

Acceptance Criteria:

1. Improved page load times and performance metrics.
2. User feedback mechanisms are implemented and functional.
3. Accessibility features meet standard guidelines (e.g., WCAG).

Tasks:

- **Optimization:** Analyze and optimize page load times.
- **Feedback:** Implement tooltips, error messages, and other feedback mechanisms.
- **Accessibility:** Ensure the site meets accessibility guidelines.
- **Testing:** Conduct usability testing and gather user feedback.
- **Iteration:** Iterate on the enhancements based on feedback.

Report Sharing Implementation

Goal: Provide options for sharing reports through PDF and cloud integration.

Features:

1. Implement functionality to generate and download reports as PDFs.
2. OR Integrate cloud services for report sharing via links.
3. Provide a user interface for choosing report sharing options.

Acceptance Criteria:

1. Users can generate and download reports as PDFs.
2. Users can share reports via links with cloud integration.
3. The report sharing interface is user-friendly and functional.

Tasks:

- **PDF Generation:** Implement backend functionality to generate reports as PDFs.
- **Cloud Integration:** Integrate cloud services for report storage and sharing.
- **UI Development:** Develop the user interface for report sharing options.
- **Testing:** Test the PDF generation and cloud sharing functionalities.
- **Review:** Conduct reviews to ensure report sharing features meet requirements.

Communication Plan

- **Daily Stand-ups:** Ensure regular updates and immediate resolution of blockers.
- **Sprint Reviews:** Showcase completed features and gather feedback from productowner.
- **Sprint Retrospectives:** Reflect on sprint performance and identify areas for improvement.

Contingency Plan

- **Risk Identification:** Identify potential risks and develop mitigation strategies in advance.
- **Prioritization:** Prioritize high-priority user stories to ensure core functionalities are delivered within the sprint timeframe.

Success Metrics

1. **Design Approval:**
 - Product Owner approve the Figma designs.
2. **UI Functionality:**
 - The new UI is responsive and functions correctly across all major browsers.

3. **Animation Performance:**

- Animations enhance the user experience without causing performance issues.

4. **User Feedback:**

- Positive user feedback on the enhanced user experience.

5. **Report Sharing:**

- Successful implementation of PDF generation and cloud sharing options.

This scope document provides a detailed plan for the redesign of the Carbon Calculator website, ensuring a comprehensive approach to achieving the project objectives and meeting stakeholder expectations.
